OneTouchServices Launches Redesigned Website

FOR IMMEDIATE RELEASE

STAINES, July 5, 2019 – OneTouchServices is proud to announce that their redesigned website has successfully launched. Providing services on every level of IT and Data Technology, the company is pleased to offer a newly designed, easy-to-navigate site for their customers.

Operating in Surrey and the Greater London area since 2005, OneTouchServices has significantly expanded their computer repair, IT solutions, smart systems, and web development services for customers to benefit from. With this expansion came two physical store locations, in Staines and Bagshot, prompting the creation of a redesigned website.

The site now details all the available OneTouchServices store locations, contact details, and their current hourly rates, providing customers with all the information they need to make the right choice.

Opting for a sleek, modern look, the website redesign is clean and easy to use for customers of all computer literacy levels. Accents of orange draw the eye to critical features, prompting the user to click and navigate to appropriate information. Links are also available to their Facebook, Twitter, and LinkedIn pages.

The site is also optimized for mobile users, allowing for on-the-go use and access to OneTouchServices whenever needed. Key information is all clearly presented on the landing page and utilized on a desktop computer, laptop, smartphone, or tablet device.

Visitors to the site are free to navigate without pop-ups or the need to register. OneTouchServices prides themselves on being transparent and honest with their consultations, offering a free initial consultation for computer issues.

Customers and businesses that are interested in contacting OneTouchServices for their computer repair, IT solutions, web development, and smart systems should take a look at the new site, available at [www.onetouchservices.co.uk](http://www.onetouchservices.co.uk) now.

One Touch Services was founded early 2005 and offered call out support. Since then they have steadily grown and now offer services on every level of ICT and Data Technology. One Touch Services currently has a wide client base spanning from Accountants to Equestrian Specialists.
